

Reciprocal Manager Upgrade Instructions

(From v3.30 to v3.31)

Step 1: Uploading New Files

Upload only the following files to the directory you have RM v3.30 currently installed in:

- admin.php
- adminf.php
- adminh.php
- admintemplate.php
- captcha.php
- crawler_class.php
- index.php
- makepages.php
- nav-left.php
- nav-top.php
- template.php
- test.php
- upgrade.php
- user.php
- util.php
- validate.php
- validatelinks.php
- adminstyle.css
- images/adminf.gif
- images/adminh.gif

Step 2: Run the upgrade.php file

Point your browser to the upgrade.php file. For example, if you have RM installed in a directory name "resources" and your website is http://www.domain.com you would type http://www.domain.com/resources/upgrade.php in your browser. Once there, simply follow the onscreen instructions.

Step 3: Delete the upgrade.php file

Once you're done upgrading to Reciprocal Manager v3.31, please make sure to delete the upgrade.php file.

Congratulations! You're done 😊

Please read the quick start guide and the user's manual for more info on setting up your directory and how to begin exchanging links.

Thank you,
Kevin L. Ocasio
